Downloading and Installing the AirNet Client for Mac OS X 10.5x (Leopard) and 10.6x (Snow Leopard)

**Step 1:** Click the Wi-Fi icon in the top-right menu bar and connect to AirNet.

**Step 2:** Open an Internet browser (Safari, Firefox, etc). The AirNet client can be downloaded from either the AirNet welcome page or from Softweb (https://softweb.cc.stonybrook.edu). You will need your NetID and NetID password in order to access SoftWeb. Once authenticated, the AirNet client can be found under “Utilities > Mac AirNet Client.”
**Step 3:** Double-click the AirNet icon (at the saved destination). The following window will open.

**Step 4:** Hit **Open** if the following window pops up.

**Step 5:** Enter your NetID and click **Continue**. The VPN client will be automatically configured for you. It will open and close the System Preferences on its own.

**Step 6:** In your menu bar on the top right of your screen, a VPN icon will appear. Click and select **Connect to VPN (PPTP)**.
Step 7: Enter your NetID and NetID password and click OK.

Step 8: You should see “Connecting...Authenticating” and then a running time clock will appear. This means you have successfully connected to AirNet.
