Stony Brook’s Work-At-Home (WAH) Virtual Private Network (VPN) (For MAC OS Users)

To access campus resources - such as department shared folders, MySBfiles folder, PeopleSoft Administrative system, privileged SOLAR access, etc.- from off campus using DSL or cable you must use the University’s Work-At-Home VPN. Users who dial into the University do not need this.

You must have a Net ID to access the Work-At-Home VPN. What’s Net ID? Click here to find out.

How to connect to Work-At-Home VPN

Open your web browser (Safari or Camino, Firefox does not work) and enter the following URL in the address bar:

http://sslj.wah.stonybrook.edu

The first time you connect you will have to install the Juniper Network software. You must click ‘Yes’ here.
You might be prompted for your administrative password to install this software. This should be your username and password for your computer logon, not your NetID and NetID password.

Wait for the next dialog box....

You may see:

When you see the following screen you are connected to the Work-at-Home VPN.
You should also see the following screen. It might be hidden behind the screen from the web browser.

![Network Connect](image)

**IMPORTANT!** Make sure you save your work often. If you are idle for 30 minutes your Work-at-Home VPN connection will be terminated. There is a maximum session length of 8 hours.

**How to disconnect from the VPN:**

You can sign out using either the ‘Sign Out’ button on the Network Connect screen or in the top right corner on your web browser.

**Error Message using Firefox:**
